To: Chris Buller <cbuller@magna-aspirations.org>

Dear Mr Buller,

It has recently come to my attention that the academy lacks an online teaching service. By this definition, you may wonder why services such as Google Classroom, Tassomai, and HegartyMaths/Sparx Maths are insufficient - allow me to introduce my idea for an extended education provision: MagnaLearn.

MagnaLearn would be an online website that students can visit that enables them to:

- Learn using online help videos and adapted booklets;
- Test their knowledge using Progress Checks, Mastery Questions and Deliberate Practice;
- Revise for upcoming exams using revision guides and interactive PLCs; and
- Access targeted individual and group tutoring sessions with subject teachers.

It would be great for all subjects to have materials available for students to access on the service. It would allow us to stand out from other academies by increasing test results and lead the Aspirations Academies Trust in introducing the latest technologies across their academies.

This would be an amazing service for both staff and students and could act as homework. The system would be relatively low cost and just require in-house web development (possibly student-led with the only cost being for domain purchase) and a few service subscriptions to enable customisation and tailoring for specific students. I believe that this technology is within our reach so long as we are proactive to introduce it.

Finally, here is a mock-up of the service without functional subject pages so that you can see the potential of the website and have something to present: <https://bit.ly/magnalearn>. Please note that this is far from the final design and merely shows what students could access and the page layout.

Yours Sincerely,

Neo Skinner
